

THE GREAT BAY LIVING SHORELINE PROJECT

Moody Point Further Recommendations

Below are ideas, suggestions, and comments provided by the GBLS program coordinators and attendees of the final GBLS workshop held on April 8, 2022. This feedback was generated largely in response to the Design Team's final presentation as well as review of their suggested living shoreline design memo and plans.

Moody Point Positives

- Meeting landowner goals for rec access.
- Liked the slope stabilization.
- Presentation of design well displayed and easy to digest. Great for this specific landowner.
- Good job dealing with the large waterfront and all the different factors for this area.
- I like that you tackled both living shoreline area (complex!) and the resident's concerns about access to the launch.
- Comprehensive upland plan for organizing program and evaluation.
- Great idea on the kayak rack and considering the desires of residences.
- Nice details of potential shoreline erosion mitigation measures.
- I liked how thorough of an assessment was done at Moody Point and how a comprehensive approach was taken to address issues from the shoreline to the upland.
- Amplifying and expanding upon lessons learned at wagon hill farm within four additional sites to establish a larger cadre of individuals who can begin to institutionalize approach across watershed.
- Nice job reconciling E/E project goals and community goals. Like: extending ramp and floating dock, phasing, soil lists, root wads etc. x-G cut through berm.

Moody Point Suggestions

- The upland stormwater measures seem appropriate and could maybe be implemented separately.
- May want to consider stronger protection for low marsh edge (may not have seen full info from Troy).
- Not sure if the memo already includes this... ideas how to prioritize which sections of the shoreline - it's such a large area funding would seem to be an issue.
- Would love to see model results of increasing tidal exchange behind agricultural berm. Given the parallel issues, it'd be great to simultaneously restore west marsh and north marsh.

THE GREAT BAY LIVING SHORELINE PROJECT

- Some of the shoreline interventions appear to require more extensive permitting process - did private landowner communicate thoughts on appetite to budget for this//potential length process?
- The roof runoff issue sounds like it's at a scale that the NHDES Soak Up the Rain (SOAK) program could help with. Let me know if I could help connect the HOA with SOAK - Sally.
- May already be in plan - but adding a gathering space/ educational component to the shoreline area would be nice.
- It would be great to have a short description of how the interaction with the HOA went, as this is a common situation.

Moody Point Presentation Questions

Q: For the Moody Point, Central Shore concept. Are the details presented typical and available from some public domain?

A: These details are typical for a system that would naturally recruit wood vs. a boulder bank condition. The use of rootwads that can be harvested locally were a specific choice for this site. The use of toe structure is site dependent.
